Profile Summary

Java Backend Developer with **3.8+ years** of experience designing and developing scalable, high-performance microservices applications. Expertise in **Spring** ecosystem including **Spring Boot**, **Spring WebFlux**, and **Spring Security (JWT)** for building secure **REST APIs**. Proficient in relational databases (**PostgreSQL**, **MySQL**) and delivering robust, testable code using **JUnit5** & **Mockito**. Strong problem-solving abilities with proven experience in **Agile/Scrum** environments.

Skills

- **Languages:** Java
- **Backend & Frameworks:** Spring, Spring Boot, Spring WebFlux (Reactive), Spring Security (JWT), REST APIs, Microservices, Hibernate, JPA, JDBC
- **Tools & DevOps:** Docker, Maven, Git, GitHub Actions, Redis (Caching), Kafka, Swagger, JUnit5, Mockito, Keycloak, Kubernetes, JSON, XML
- **Databases:** MySQL, PostgreSQL, H2

Experience

Mihaan Information Technology Services Private Limited. **Bangalore, KA, India (Remote)**
Software Engineer **June 2024 – Present**

- Designed, developed, and optimized **reactive backend APIs** using Spring Boot and Spring WebFlux, improving API response times by **~30%** and reducing redundant database calls by **~25%** through non-blocking processing.
- Built **robust data ingestion pipelines** capable of processing structured data from multiple file formats (JSON, XML, Excel) and persisting data across complex parent-child relational schemas with **95%+ accuracy**.
- Implemented **incremental data processing logic** to detect and handle add, update, and delete operations, reducing duplicate records by **~70%** and minimizing data loss by **~90%**.
- Developed **data standardization and preprocessing workflows**, reducing manual file cleanup effort by **~60%** and improving ingestion consistency.
- Contributed to a **tenant-based content distribution architecture**, enabling automated and scalable data delivery and significantly reducing manual release effort.
- Performed **database query tuning and batch optimization**, improving large-file processing performance and overall system throughput.
- Collaborated closely with frontend, QA, and product teams to resolve integration issues, refine API contracts, and ensure system reliability.

Wissen Infotech
Junior Software Engineer

Bangalore, KA, India
March 2022 – January 2024

- Developed and maintained **backend services** using Java, Spring Boot, REST APIs, JPA, and MySQL for enterprise applications.
- Implemented **secure API authentication and authorization** using Spring Security with JWT.
- Built and exposed REST APIs to support multiple business workflows and frontend integrations.
- Integrated **email notification services** using SMTP for workflow and system communication.
- Improved **code quality and maintainability** through unit testing with JUnit5 and Mockito and continuous analysis using SonarQube.
- Worked closely with frontend teams to debug API issues, refine request/response contracts, and reduce integration defects.
- Followed **Agile/Scrum practices**, actively participating in sprint planning, stand-ups, reviews, and retrospectives.
- Implemented **structured logging** using Log4J to improve traceability and reduce debugging time in QA and production environments.

Appslucent Software Pvt Ltd
Software Engineer – Intern

Bangalore, KA, India
July 2019 – Aug 2019

- **Web Application for Instructor-Student Portal:** Designed and built a high-traffic web application supporting 1000+ requests per hour, enabling seamless interaction between instructors and students.
- **LMS Module Development:** Implemented core LMS workflows including assignment upload, grading, and student submission tracking, achieving 80% functional coverage of standard LMS features.

Projects

Global Trade Management (GTM)

Role: Software Engineer – Backend

Tech Stack: Java, Spring Boot, Spring WebFlux, REST APIs, Microservices, PostgreSQL

Description:

Global Trade Management (GTM) is an enterprise compliance platform designed to manage and validate international trade transactions. The system handles trade workflows, regulatory checks, and integrations with frontend and downstream systems, ensuring accuracy, scalability, and high performance for trade compliance operations.

Trade Content Management (TCM)

Role: Software Engineer – Backend

Tech Stack: Java, Spring Boot, WebFlux, PostgreSQL, JSON, XML, Excel

Description:

Trade Content Management (TCM) is a backend platform responsible for managing and processing Restricted Party List (RPL) and compliance-related content received from multiple global sources. The system supports multi-format file ingestion, complex relational data structures, and reliable data processing to maintain accurate and up-to-date compliance content.

Content Distribution System (CDS)

Role: Software Engineer – Backend

Tech Stack: Java, Spring Boot, Microservices, PostgreSQL

Description:

Content Distribution System (CDS) is a standalone, tenant-based platform built to distribute processed trade and compliance content across multiple tenants. The system ensures scalable, automated, and secure delivery of content while supporting multi-tenant architecture and centralized content management.

Kerala Water Authority (KWA)

Role: Junior Software Engineer – Backend

Tech Stack: Java, Spring Boot, REST APIs, MySQL, JUnit, Swagger3, Git

Description:

Kerala Water Authority (KWA) is an automated water billing and consumer management system used to calculate water usage and generate bills for city-wide consumers. The platform integrates with smart meter infrastructure and backend services to manage consumption data, billing workflows, and reporting dashboards.

Service Catalog (Internal Skill Assessment Platform)

Role: Junior Software Engineer – Backend

Tech Stack: Java, Spring Boot, Spring Security (JWT), REST APIs, SMTP, MySQL, SonarQube, Git

Description:

Service Catalog is an internal enterprise application designed to assess employee skills and support promotion-related evaluations. The system provides secure access, assessment workflows, notifications, and reporting capabilities to enable structured skill evaluation across the organization.

Education

Ghousia College of Engineering

Ramanagaram, KA, India

Bachelor of Engineering (BE) - Information Science and Engineering (ISE)

Aug 2016 – Aug 2020
